

## Instructions

1. Open connect-four-server and type in npm ci to install all dependencies
2. Run the server using npm start
3. Open the connect-four-client and type in npm ci to install all dependencies
4. Run the client using npm start
5. Go to <http://localhost:3000/> to view the home screen, from here you have different options
  - a. Change your username from the autogenerated one
  - b. Press Join/Create Existing Game to create a room with your given code
  - c. Enter in a game code and press join/create existing game to join a friends room with their code
  - d. Join a random game by pressing the join random game
6. When in game, you will be waiting until another player joins (either waiting until someone else enters your code and presses join/create existing game or until another player presses random game). While waiting you can change the theme between classic, Christmas and vaporwave.

In cases of the same username being used in the same game, the 2<sup>nd</sup> username is given an additional identifier (2) added.

To test, open up multiple clients. Game should support unlimited number of players.
